

Retailers...

...turn red flags green with a TURNKEY solution from

abc doors

We understand...

Profitable retail needs minimal disruption to trading. Partnering with ABC Doors will bring a level of professionalism that lifts away the pressure and minimises downtime. We're proven providers for emergency repairs, planned maintenance, store refurbishment and new build projects.

Proven?

We have many retail clients, however, one name that confirms our capability is **Co-op**. ABC Doors is the provider of front and back of house doors for all Co-op stores in the North of England, Scotland and the Scottish islands. Our teams of door engineers work to the Co-op's Service Level Agreements for repairs and maintenance. And, our projects teams work with Co-op's contractors to hit completion dates for refurbishment/construction programmes. In-house manufacturing of aluminium doors and screens and a tailored parts stocking inventory at depots and on vehicles short-cuts operational delays to critical assets.

...Low first time fix rates

...Slow response times to call-outs

...Downtime from drive & sensor failures

...Non-compliant safety systems

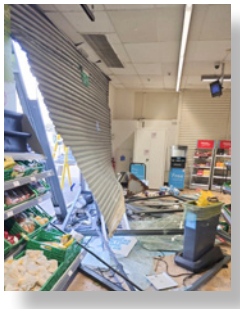

Our engineers are benchmarked on first time fix rates. ABC Doors brings a combination of experience, expertise and well planned van and depot inventory to meet deployed door systems with the best-chance of a first time fix. Response time requirements are handled with well managed and adequate resource for the demand. ABC Doors works with retailers to succeed, we don't set ourselves up to fail! Safe working, compliant systems and doors always left in a safe state is our unwavering commitment.

...Downtime from Break-ins

...Long lead times on doors and screens

ABC Doors' first action, after making the scene safe and secure alongside other trades, is to restore doors to operation where possible, survey for replacements and time-line their installation. In-house manufacturing of aluminium doors and screens allows us to flex in response to urgent need and also ensures we meet all programme dates for store refurbishments and new-build without reliance on third-party manufacture.

...New doors delaying store openings

...Poorly managed project installations

We don't just send door engineers and hope for the best... ABC Doors is vastly experienced in construction and well versed in the time sensitive pressures of store construction and refurbishment programmes. ABC's project management department runs installations working with contractors and other trades to ensure handover and opening dates are hit.

Scoping visits, site surveys, quotations and cost validations, product ordering, production planning, resource allocation, RAMS, completion dates and opening dates are all managed with robust escalation processes to ensure stores open on time.

...Too much time spent managing multiple providers

With many suppliers and providers for doors and associated services comes increased resource needed to keep multiple threads on track. Managing the potential passing of blame by suppliers when issues occur adds further stress. A turnkey solution from a single source, ABC, delivers trust, consistent outcomes, high accountability and cost control. ABC also adds an agile approach that is always looking for improvement in product and working practises for a best-value doors and service solution.

- Manufacture
- Supply
- Installation
- Planned preventative maintenance
- Reactive & emergency repairs
- New build & refurbishment
